

SPiDER TM 3600

Enterprise Security Management beyond expectation

'SPiDER TM,' giving you the whole picture of your information security

Key Features

- Comprehensive and intuitive monitoring
- Easy-to-deploy and Easy-to-expand
- Supports agent and agentless function
- Unique 3D Visualization

SPiDER TM provides your organization with flexible and efficient monitoring of your most important business and its assets

With the rise of cyber crimes in recent years, organizations have to be one step ahead of sophisticated cyber attacks.

SPiDER TM offers a proactive analysis and alert against the growing threats of today and tomorrow by providing actionable intelligence and minimizing false positives. Administrators will have accurate information to better prepare and combat malicious cyber attacks.

Real-time Monitoring Alerts

Offering **real-time monitoring and alerts** of every single event going on in the network of the organization, administrators will have all information from A to Z. Administrators will be up-to-the-minute through monitoring and analyzing logs from any security and network device, in real-time.

With a concentration on the user, SPiDER TM can be configured for each individual user, with authorization levels allowing a user-friendly and protected system. With its diverse and versatile reporting, administrators can easily implement the security policy to better fit the organization.

When an attack occurs, mitigation can mean the difference between thousands of dollars to millions.

The bottom line being on everyone's mind, SPiDER TM will reduce security costs in many ways. Quick response will reduce the cost of damage required in restoration of information assets.

Vertical and Horizontal Expansion

The SPiDER TM has the industry leading performance. Just by adding the collector module (up to 3), 7500 sustained EPS is guaranteed within a system. Through cascade and multi-site configurations, the number of device connections and the volume of log overcome the limit. Hence, SPiDER TM gives you flexibility and adaptability on your network environment.

A unique security management tool, SPiDER TM, allows organizations to free up valuable time of the security administrator by not concentrating on each and every security and network device, but instead on the whole picture resulting in time reduction in minuscule tasks and concentration on essential security activities.

One More Dimension: 3D Dashboard

SPiDER TM not only offers a 2D dashboard but a unique and **intuitive out-of-the-box 3D dashboard** as well. The 3D dashboard will allow security administrators to have a holistic view of the organizations network of the most important information. Having a bird's eye view of key information such as when the attack occurred, who the attacker is, what is being attacked, and more, will allow security administrators to promptly without ambiguity to view the network, at a glance.

*** Event Collection**

- Supports simultaneous agent & agentless function
- Interoperate with 250 Security /network devices
- Various protocols

*** Anomaly Based Analysis**

- Unknown malware detection
- Real time correlation

*** Statistical Analysis**

- Top Source IP, Destination IP, Port
- Real-time event (IP, Action, Signature) status
- Today, Yesterday, Week average
- Maximum, Minimum event occurring rate alert

*** User APP Log Monitoring**

- Detect application Error and Warning
- User-defined condition alerting

*** System Monitoring**

- System Resource(CPU, Memory, Disk Usage) Monitoring
- Successful/Failed Login Activity
- Access and Configuration Changes
- Important Processes Monitoring
- Important File Integrity Check

*** Customizable Reporting**

- Easy to use
- Diverse file format

*** 3D Visualization**

- Intuitive visualization
- Holistic view
- Detailed information of top country, attacker, victim, attack type, etc.

SPIDER TM 3600 3D Console

SPiDER TM 3600 Monitoring Screen

Supported devices

Security Devices

Firewall, IDS/IPS, Web FW, UTM, VPN, etc.

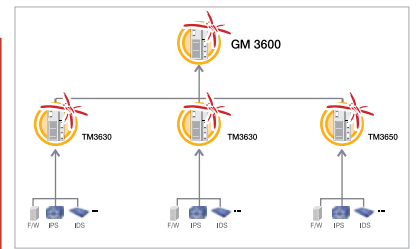

Network Devices

Switch, Router , etc.

Application Servers

Web Access Log, User App.

Vertical & horizontal Expansion

Model	TM3605	TM3630	TM3650	TM3675	GM3600
OS	Linux				
Sustained EPS	750	3000	5000	7500	-
Max. Devices	100	500	850	1250	-

NW interface	Dual Gigabit Ethernet				
Power	600W	720W Redundant			
Dimension(mm)	43 × 437 × 503	89 × 437 × 648			
Chassis	1U	2U			

※ HBA(Host Bus Adapter) optionally available for external storage.

※ GM3600 (Global Manager)

IGLOO SECURITY'S SPiDER TM manages the sporadic individual security and network devices, servers, applications and database to efficiently and effectively protect users from attacks and possible threats. IGLOO SECURITY'S SPiDER TM quickly identifies the source, the cause and destination to rapidly respond so information asset can be protected.
